Here is a sampling of some overhead transmission lines.

- Simple three-phase distribution line (3 wires for 3 phases), they typically carry 7.2 kV or 14.4 kV.

- Dual three-phase transmission lines (3 bundles of wires on each side for two/dual three-phase lines), typically 110 kV or 220 kV. On the top is a single ground/shield wire for lightning protection (usually grounded at each tower).
