

### 1) Plot reflection coefficient $\Gamma = 0.707\angle-45^\circ$ for a $50\ \Omega$ transmission line

- Use straight edge to draw radial line from center of Smith chart through the  $-45^\circ$  mark on “ANGLE OF REFLECTION COEFFICIENT IN DEGREES” scale (inner ring surrounding Smith chart).
- Use “REFL. COEFF. V or I” scale at bottom right of chart to set compass to  $|\Gamma| = 0.707$ , and draw arc, centered on Smith chart, through  $-45^\circ$  radial line.
- The intersection of radial line & arc marks  $\Gamma = 0.707\angle-45^\circ$  on Smith chart.

### 2) Read normalized impedance $z$ corresponding to this $\Gamma$ . Also, find the impedance $Z$ .

- On Smith chart, at  $\Gamma = 0.707\angle-45^\circ$  point, locate and read/interpolate value of appropriate “ $r$ ” circle as  $r = 1$ . The normalized resistance family of circles are centered on horizontal axis and with values shown on horizontal axis.
- On Smith chart, at  $\Gamma = 0.707\angle-45^\circ$  point, locate and read/interpolate value of appropriate “ $x$ ” arc as  $x = -2$ . Normalized reactance arcs originate horizontal axis on LH side of Smith chart. Values are shown just inside the outer ring of the Smith chart; values above horizontal axis are positive/inductive while those below are negative/capacitive.
- Put  $r$  and  $x$  together to get the normalized impedance  $z = 1 - j2\ \Omega/\Omega$ .
- Find impedance corresponding to  $\Gamma = 0.707\angle-45^\circ$  by multiplying  $z$  w/ characteristic impedance  $Z_0$  to get  $Z = Z_0 z = 50(1 - j2) \Rightarrow$   $Z = 50 - j100\ \Omega$ .

### 3) Read standing wave ratio SWR (VSWR) corresponding to $\Gamma = 0.707\angle-45^\circ$

- Use “REFL. COEFF. V or I” scale below Smith chart on right side to set your compass to  $|\Gamma| = 0.707$ .
- Draw  $0.707$  arc, centered on Smith chart scales, through SWR (VSWR) scale below Smith chart on left side.
- Read standing wave ratio to be  $\text{SWR} = 5.8$ .

# Simple Smith Chart

$$Z_0 = 50 \Omega$$

circle of  $|r| = 0.707$

$\angle \Gamma$

$\angle \Gamma = -45^\circ$

$\Gamma = -2$

VSWR = 5.8

$|r| = 0.707$

REFL. COEFF. V or I  
REFL. COEFF. P
